The Task Manager

Set Up

The application works like a regular website, to run you need a local server with access to the Internet or a hosting.

Download taskmanager.zip from:
https://github.com/VladULazarev/task_manager/tree/main/taskmanager, unzip it into your project directory.
Or use the command: $ git clone git@github.com:VladULazarev/task_manager.git in your Bash terminal.

You need to create a database. Open the new DB and **Import** the file **taskmanager.sql.** The file is located in the root folder.

DB connection settings need to be edited in the file: core\DbConnection.php

After start you will see:

Welcom to Simple Task Handler

Please, register or sign in

Register	Sign In

First, you need to register. All input fields are checked for 'bad' characters.

Email, Password fields are checked for presence in the users table.

If there are matches the user sees a message about this and registration is not possible.

The password must have more than 5 symbols.
